

Angelo State University is implementing the UALERT system to provide campus safety and security professionals the ability to reach the campus community with information and updates during unforeseen events or emergencies, within minutes, through phone calls, e-mails and/or text messages.

In light of the tragedy at Virginia Tech, we are forced to prepare for situations that we never could have anticipated happening and recognize the important role that immediate communication plays in keeping students and our employees safe. As part of our comprehensive security plan, the UALERT system will allow us to keep ASU students, faculty and staff informed whether they are in their dorms, working at their computers, or on their way to class.

For ASU to effectively implement the UALERT system, we are collecting information from some of our constituents on campus to help us in the testing of the UALERT system. In the future, this information will be collected electronically through RamPort.
